Based on the Nuebelns classical text, The New Quantum Mechanics, an exposition that clearly illustrates the principles of quantum mechanics and their applications. These principles are presented in a detailed discussion of atomic and nuclear physics, superconductivity, and magnetism. This book also considers topics in solid state physics, atomic and molecular physics, and spectroscopy. Experimental practice is covered in a separate section. Applications to magnetism and spectroscopy are presented throughout. Feynman's lectures on physics are now being published, one of the best reviews of quantum mechanics and its applications. 1. Technical Field The present disclosure relates to devices that hold tissue. More particularly, the present disclosure relates to a surgical instrument having an articulating jaw member. 2. Background of Related Art Laparoscopic and endoscopic surgical procedures are minimally invasive procedures. These procedures are performed in the interior of the abdomen through a tube or cannula. Typically, a trocar is used to create a working space and a cannula is inserted into the trocar to facilitate manipulation of instruments. As a result, reduced trauma is associated with such procedures, and relatively short recovery times are possible. Laparoscopic and endoscopic surgical procedures generally require that the surgical region be insufflated. Thus, any instrumentation inserted into the abdominal cavity must be sealed to prevent leakage of the insufflating gas and defeat the purpose of a minimally invasive surgical procedure. Additionally, laparoscopic 82157476af
